+91 8421307322 | aditya192637@gmail.com | Mumbai, India
LinkedIn | github.com/1115ADITYA | apexlistener.dev

SUMMARY

Full-stack developer and Technical Head of the Computer Engineering Students Association. Built and launched a real-time YouTube watch-party platform (Next.js, Socket.IO, Supabase) with sub-second sync for up to 20 viewers per room. Strong in JavaScript, Node.js, Python and MongoDB; seeking a software engineering internship.

EDUCATION

Vidyalankar Institute of Technology, Mumbai 2025 – 2029 (Expected)
B.E. in Information Technology **CGPA: 9.5 / 10**
Entrance Exams: MHT-CET 97.29 percentile | JEE Main 92.64 percentile

SKILLS

Languages: JavaScript, Python, C, C++, HTML, CSS
Frameworks & Libraries: Next.js, Node.js, Express.js, Socket.IO, Pandas, NumPy, Scikit-learn, Matplotlib
Databases & Backend: MongoDB, Supabase (PostgreSQL), REST APIs, WebSockets, Middleware, Authentication
Tools: Git, GitHub, Jupyter Notebook

PROJECTS

ApexListener – Real-Time YouTube Watch Party Platform apexlistener.dev
Next.js | Socket.IO | Supabase | WebSockets

- Built and deployed a live web app where friends watch YouTube videos together, locked to the same frame, with no sign-up required (anonymous, colour-coded guest identities).
- Engineered WebSocket-based playback sync with Socket.IO, targeting under 200 ms drift and automatic re-sync for viewers on slow connections; supports up to 20 concurrent viewers per room.
- Implemented shareable room codes and a collaborative shared queue where anyone can add, reorder or skip videos in real time.
- Launched publicly with SEO-optimised landing page, blog, FAQ and privacy page; promoted to online communities on Reddit to acquire early users.

Campus Circle – Student Community Platform
HTML | CSS | JavaScript | Node.js | Express.js | MongoDB

- Developed a full-stack web platform for students to connect, share updates and access campus information in one centralised place.
- Implemented user registration and login, post sharing and event updates with a responsive UI and a structured Express/MongoDB backend.

NYC Taxi Fare Predictor – Machine Learning
Python | Pandas | NumPy | Scikit-learn | Matplotlib | Jupyter

- Built a regression model on the New York City Taxi dataset to predict trip fares.
- Cleaned data, removed outliers and engineered features (trip distance, pickup time, passenger count); trained Linear Regression to improve prediction accuracy.

LEADERSHIP & EXPERIENCE

Technical Head – Computer Engineering Students Association, VIT Mumbai Present

- Lead the technical team of the student community, planning and executing tech events and projects.
- Led the tech team for Plathora 2026, coordinating development and technical delivery.
- Driving sponsor outreach and partnerships for the upcoming hackathon.
